OBJECTIVE

I want to find a place where I can continue to grow my knowledge on serverless infrastructures, frontend development, and accessible design. Hopefully make some cool thing, have fun, change some lives for the better!

EDUCATION

BS in Computer Science – Software Engineering | Oregon State - Cascades

2017 – 2021

- GPA: 3.56

EXPERIENCE

Software Developer | Mazama

2022 – PRESENT

- Rebuild our legacy frontend stack using React.js, Typescript, and Tailwind to better fit within business needs and move towards a SaaS product
- Build a template for AWS SAM Lambda functions. Including CI/CD using Github Actions, Cloudformation templates, cookiecutter, and a Python object form Lambda functions
- Support the development team with my past experiences as a software developer
- Build out a split AWS VPN using AWS' VPN Client Endpoint service for Mazama employees to efficiently connect to IP whitelisted resources
- Administer our AWS Accelerated Landing Zone organization
- Create an AWS Cloudformation template VPC for Lambdas to use so they can access IP whitelisted resources
- Write up an error matrix to be used for building out a system health dashboard of our entire AWS system, and third party resources
- Build a middle man program using Twilio to track inbound calls in a CRM
- Maintain an automated customer acquisition chatbot

Volunteer Software Engineer | Guardian Group/Effectual

2020 – 2021

- Created a site using React/AWS/Tailwind for the non-profit Guardian Group to help community experts report victims of sex trafficking to Guardian Group for review before being handed off to law enforcement

Developer Intern | CBT Nuggets

JUNE 2018 – SEP 2018

- Develop a web application using React that would be used for the QA engineer interviewing process intentionally implementing common and uncommon bugs (it was definitely a strange requirement)

- Create an internal dashboard using AWS Lambda and React to display statistics from our testing automation tool, Sauce Labs, to show the rest of the company the work the QA automation team did

Junior Developer | Redhawk Network Security

2019 – 2020

- Work with the CTO to maintain a legacy PHP code base that our clients used to see the results of our security audits on their systems
- Transition old products into a SaaS product using modern technologies like React

Student Worker and Temp Tech II | OSU-Cascades IT Department

2018 – 2021

- Troubleshoot AV equipment, faculty computer, and classroom tech issues
- Image windows/mac computers at a large scale
- Maintaining network infrastructures
- Building out technical documentation
- Much, much more

SKILLS

- Programming: React, Node, Tailwind, JavaScript, Typescript, HTML, CSS, PHP, Python, Next
- Utilities: GitHub, Git, GitLab, Command Line
- AWS: Cloudformation, VPC, Lambda, API Gateway, SQS, Cloudwatch, AWS orgs, Control Tower, Identity Center, IAM
- Data: JSON, MySQL, noSQL
- Agile/SCRUM
- Modern Development Techniques like those taught by: Robert Martin (Clean Code), Martin Fowler (Refactoring), and Sandy Metz (99 Bottles of OOP)
- Requirements Gathering Techniques: UML, User Stories, Use Cases
