## WHO AM I

I've been building software for 12 years (professional about 8 years), and I have felt so lucky to have found a passion that I can turn into a lifelong career! I started in high school as a freelance software developer and worked my way up from mom-and-pop businesses to large corporations. Recently my focus has been local, managing AWS, frontend, and backend for a small sized product company.

## EXPERIENCE

### Software Developer | Mazama

2022 – 2024

- Business: Internet Reseller
- Meet with key stake holders to gather business requirements and own the build for a frontend rebuild using React, Tailwind, cloudfornt, Lambda@edge, and S3
- Create requirements and own the development of a template using AWS SAM for developers to use when creating Python and NodeJS AWS Lambda functions
- Support and unblock my peers when needed
- Own the build of a VPN using AWS' VPN Client Endpoint and Cloudformation for employees to connect to IP whitelisted resources
- Own the maintenance of an AWS Accelerated Landing Zone organization
- Own the development of a VPC Cloudformation template for Lambdas to access IP whitelisted resources
- Own the build and requirements of a Twillio middleman program to add inbound calls to a CRM

### Software Developer | Guardian Group/Effectual

2020 – 2021

- Business: Anti-sex trafficking charity
- Work with key stake holders from both Guardian Group and Effectual to build project requirements
- Own the development and requirements of project roadmap/components
- Build out a full stack web application using AWS Amplify, React, GraphQL, Cognito, and Tailwind

### Software Developer | Redhawk Network Security

2019 – 2020

- Business: IT security consultant
- Own scoping, business requirements, and project buildout of new features and bug fixes to legacy applications
- I maintained my own work schedule
- Own the transition of legacy technology (PHP) to modern technologies (React, Node)

## **Software Developer | CBT Nuggets**

JUNE 2018 – SEP 2018

- Business: Technical training platform
- Own the creation of roadmap for a bug filled web app for interviewing QA engineers
- Own the creation of roadmap for a testing automation stats dashboard
- Create and report on a project plan and timeline for key stakeholders

## **Software Developer | Independent**

2013 – 2017

- Business: For hire development
- Build and own requirements/SOWs by working with clients on project needs
- Take on learning new frameworks, programming languages, ect to meet pre-existing application requirements
- Work with various types of clients from small mom-and-pop business to large corporations
- Common technologies used: NodeJs, PHP, JavaScript, Python, HTML, and CSS

## **SKILLS**

- AWS: Cloudformation, VPC, Lambda, API Gateway, SQS, Cloudwatch, AWS orgs, Control Tower, Identity Center, IAM
- Programming: React, Node, Tailwind, JavaScript, Typescript, HTML, CSS, PHP, Python, Next, SQL, NoSQL
- Agile/SCRUM
- Requirements Gathering Techniques: UML, User Stories, Use Cases
- Utilities: GitHub, Git, GitLab, Command Line
